

Santrev installation of Ecodrum in Victoria

Early this year Santrev announced its appointment as sole distributor for Ecodrum in Australia and New Zealand.

According to Santrev Ecodrum is widely recognised as the market leader in-vessel animal mortality composting and provides cost-effective and environmentally sound solutions to both the poultry and pig industries.

Ecodrum is manufactured in the USA using quality components. The warranty and ongoing technical support offer growers further peace of mind that their investment in the product is sound.

Recently the Santrev install team was accompanied by serviceman John Green who flew over from the US as part of the Ecodrum commitment to supporting the product and ensuring its success in Australia.

Daniel Johnson (awarded Young Agribusiness leader of the Year) from Johnson Poultry in Victoria, was the first to receive the new model in Australia.

Considering the high dead bird disposal cost in the region, the unit was eagerly awaited.

John trained the farm staff at Johnson Poultry in the operation and maintenance of the unit.

Being remote from existing infrastructure the Ecodrum was installed with a solar system by Santrev Solar.

Daniel is always looking to innovate and improve on the performance of his operation.

The Ecodrum eliminates significant biosecurity concerns and risks associated with dead bird disposal," he said.

If you would like to know more about the Ecodrum please contact the Santrev Head Office on 07 3281 3200 and one of the sales team will be happy to answer any questions and assist you further.

1. The new Ecodrum 750 model which eliminates significant risks associated with dead bird disposal. 2. The resulting compost. 3. LtoR: Erich, Santrev Sales Manager, Mat, Santrev Installer, John Green from the US and Luke Trevanion, Santrev Director. 4. Serviceman John Green explains the process to Daniel Johnson's farm staff.
