

### Santrev's ongoing commitment to free range sheds

With the push for free range getting stronger, Santrev is renewing its ongoing commitment to delivering high quality free range sheds to processors and growers across Australia and spearheading the drive to cover the increasing requirements.

This includes having finished an eight shed facility in Rosewood late last year, currently building a six shed facility at Coominya and building a two shed facility at Esk in the near future. As a grower itself, Santrev is uniquely qualified to build free range.

"It's important to all our clients that we know and understand their needs, the best way for us to do that is by owning and managing our own farms," said Santrev Director Richard Sanday.

According to The Poultry Cooperative Research Centre, currently 40% of eggs and 15% of meat chickens in Australia are produced free range, with dramatic increases expected over the next five years.

Whether or not the industry can meet the demands is a serious concern, with Coles and Woolworths phasing out caged eggs.

"Thankfully, Santrev will continue delivering our uniquely designed, tailor made sheds to meet growers' requirements in order to fill the

Richard Sanday and Luke Trevanion from Santrev at the Peru Poultry Congress

industry's needs," said Richard.

"Specifications include Santrev full side wall opening systems, roof ventilation system, unique free range cooling system and solid and curtain side wall options."

Keen to demonstrate the company's expert builds, all PIX attendees or anyone looking to build free range sheds are welcome to visit a Santrev designed and built, modern free range farm in Queensland.

If you are interested in attending a farm visit or want to discuss building options, Call 1300 815 888 or visit [www.santrev.com](http://www.santrev.com) to get in touch to one of the Santrev team members.

Santrev can offer the full turnkey package, from design to ongoing management support and is eager to put its 40 year's of building and 30 year farm management experience to use for growers and processors Australia wide.

### GE Silos, new to PIX but not new to the industry

GE Silos has been manufacturing the highest quality silos for more than 34 years. Since the first silo was built the company's focus has been on making the best silo for the industry.

"We have created many improvements over the years which have derived from listening to the market and the problems the industries face with storage," said Lyn Comer, Managing Director, GE Silos.

"This is how we became the first manufacturer to introduce the heavy duty blower pipes which previously were a common problem on large poultry farms.

"GE Silos has become a trusted leader in the industry because of our attention to detail and our passion for silos.

"Silos are what we do and where all our focus is."

GE Silos has been supplying to more than 50 of the major stockfeed companies, poultry house construction companies and small to large poultry growers.

"This is due to our history of great service, high quality products, and excellent backup service," said Lyn."

Come in and visit GE Silos and talk to the staff at PIX 2014.
